

INTRODUCING ROCKET MATTER, THE WEB GENERATION OF LEGAL SOFTWARE
February 20, 2008

We have seen the frustrations of the small and solo law firm. We have checked out the software you're stuck with. We understand the value of your time. And we know there is a better answer for you.

Allow us to introduce Rocket Matter, the web generation of legal software.

Rocket Matter is web-based practice management software, accessible from anywhere with Internet access. Use it on a Mac, PC, iPhone, or even a Linux machine. Log on and bill time from the office, home, or on the road.

Rocket Matter is designed to be as simple to use as possible. Your calendar, contact manager, matter manager, and time and billing software is rolled into one integrated, enjoyable product. Generate invoices for all of your billable matters with a single click of the mouse.

Our "Bill as you Work"TM technology captures your billable time as you go about your day. There's no need to total up hours at the end of the billing cycle or to figure out where your time went.

Getting started is easy. You don't have to buy servers. You don't have to pay someone to install Rocket Matter. You don't even have to buy licenses. You only pay for the number of users you want, and that's it. Best of all, you can save the likely \$8000 you'd have to pay for a traditional practice management setup.

With Rocket Matter, you can sleep well, knowing you have daily backups and security managed for you automatically. And since our servers are in a redundant, premier data center, you have an instant disaster-recovery plan.
